KNOWLEDGE, ATTITUDES, PRACTICES IN THE FIELD OF ENERGY EFFICIENCY

sociological study based on the opinions of the general population and service providers in the fields of education, health and social

General population - 1009 households

Managers of services in the social, educational, health fields - 205 services

Data collection period: December 16, 2024 - January 27, 2025

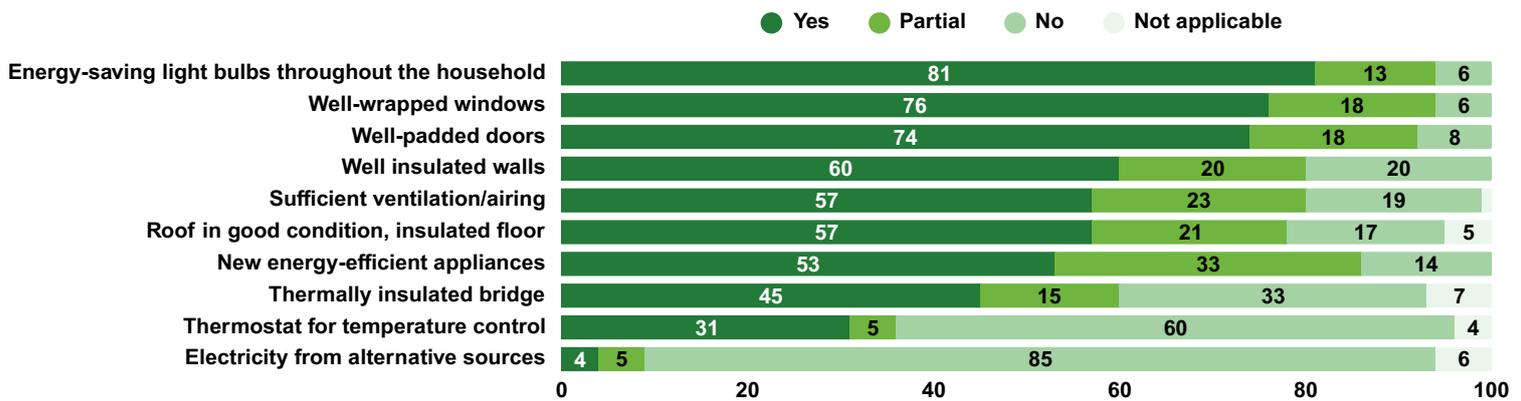

Methodology: sociological survey based on questionnaire

Moldova

GENERAL POPULATION - PRACTICES

What energy efficiency measures do you apply at household level? (%)

Only 9% of the total number of respondents mentioned that they use electricity from alternative energy sources.

The main reason for this low share would be the high costs of purchasing and installing photovoltaic panels or insufficient knowledge about their importance and long-term impact.

Every 2nd person who participated in the research mentioned that they use new energy-efficient household appliances.

Every 3rd person – uses a thermostat to control the temperature.

3 out of 4 respondents mentioned that window insulation and door lining are the energy efficiency measures applied for their home.

What types of energy efficiency measures do you plan in the next 2 years? (%)
